SUMMARY

Backend and full-stack software engineer with 5+ years building production systems in TypeScript/Node.js, Go, and Python. I design and ship complete platforms end-to-end: multi-tenant SaaS, REST APIs, authentication, and real-time services, on a strong algorithmic foundation. A relentless, self-directed learner who goes deep and picks up whatever a problem demands. Cofounder of DC Creation Studio.

EXPERIENCE

Cofounder & Software Engineer DC Creation Studio

2024 – Present

- Cofounded a software agency that helps non-technical founders design, build, and ship production software products.
- **Lead** backend and full-stack engineering across client products, system architecture, authentication, real-time services, database design, and cloud deployment (Docker / Kubernetes). Key builds detailed under Projects below.
- Deliver products end-to-end, from data modelling and API design through production deployment and handoff documentation.

Full Stack Engineer Mercurie — Lagos, Nigeria

Aug 2022 – Oct 2024

- Built and maintained scalable backend applications in Node.js, Python, and Go.
- Designed and optimised RESTful APIs, improving system integration and performance.
- Improved database schema design and query performance; implemented authentication and authorisation to meet security standards.
- Built microservices supporting core business operations; reviewed code and mentored junior developers.
- Partnered with frontend engineers to deliver user-facing features and optimise UI performance.

Backend Developer Mercurie — Ikoyi, Lagos

Apr 2020 – Oct 2020

- Developed and maintained backend systems following clean-code practices.
- Translated business requirements into technical implementations and data-processing flows; built reusable libraries and conducted UI testing.

Software Developer Mercurie — Ikoyi, Lagos

May 2019 – Aug 2019

- Configured and customised B2C commerce solutions to meet business needs.
- Wrote clean, well-tested code; responded to system faults quickly to minimise downtime; and deployed and maintained client websites.

SELECTED PROJECTS

- **TFSpaces** — Multi-tenant real-estate workspace SaaS (workspaces contain spaces, properties, timelines, documents, and payments, with a full invitation system). Independently architected and built the backend (NestJS, PostgreSQL/Prisma): per-workspace subdomains, three auth flows (Google OAuth, email OTP, phone OTP) unified under one JWT layer, 10 role RBAC, Supabase storage, SendGrid email, WebSockets, and rate limiting, 390+ commits. Live frontend built with the team (Next.js, React). tfspaces.com
- **Elvin Dake** — Headless Shopify storefront for a fashion brand, migrated from a custom Liquid theme to Hydrogen (React Router, Shopify Oxygen, GraphQL, Sanity CMS); content-driven through Shopify metaobjects, with a documented migration and known-gaps handoff. elvindake.com
- **Petra House Andover** — Client website (React, Vite, Tailwind, Framer Motion) with a YouTube sermon library, Cloudinary media hosting, and an EmailJS contact & prayer-request flow. petrahouse.org.uk
- **apidesignbp** — Reference REST API demonstrating API-design best practices (TypeScript, Express, Prisma) with a full Jest / Supertest test suite. github.com/Prime-Cave/apidesignbp
- **GoBookStore** — REST API in Go (Gorilla Mux, GORM / MySQL) using a clean cmd/pkg project layout. github.com/Prime-Cave/GoBookStore

PROBLEM-SOLVING

- Ongoing algorithmic practice on Codewars across multiple languages (codewars.com/users/Prime-Cave).
- Open-source contributions on GitHub across Go, TypeScript, and Python projects.

LEADERSHIP & COMMUNITY

Founder & Lead Organiser RUN Tech Space — Redeemer's University

Oct 2020 – Oct 2021

- Founded and led RUN Tech Space, Redeemer's University's official student tech community, creating a collaborative environment for student engineers and developers.
- Secured formal university approval to operate as a recognised student body and built a sustainable leadership structure for continuity beyond my tenure.

SKILLS

Languages (proficient) TypeScript, JavaScript (Node.js), Go, Python

Languages (familiar) Rust

Backend & APIs NestJS, Express, REST API design, JWT & OAuth, WebSockets (Socket.io), microservices

Frontend Next.js, React, Redux

Data PostgreSQL, MySQL, MongoDB, Prisma ORM, Google BigQuery, schema design & optimisation

Infra & DevOps Docker, Kubernetes, CI/CD (GitHub Actions), Railway, Vercel, Supabase

Practices System architecture, multi-tenancy, RBAC, testing (Jest / Supertest), code review, mentorship

EDUCATION

B.Sc. Entrepreneurial Leadership (BEL) African Leadership University, Kigali, Rwanda

Sep 2024 – June 2028

B.Sc. Computer Science Redeemer's University, Ede, Osun State, Nigeria

Oct 2017 – Oct 2021
